healthy home

the worst thing for millions of asthma and allergy sufferers may be the air inside their own homes — where indoor air can be up to five times worse than outdoor air!

a SMART central vacuum system is really smart for families with young children and for people suffering from asthma and allergies. unlike portable vacuums that can recirculate dust, a SMART central vacuum system carries dirt, dust, dust mites, pollen and other allergens out of your home — away from living areas — to a receptacle usually located in the garage or basement.

even if you don't suffer from allergies or asthma, with a SMART central vacuum system your living environment stays cleaner and dust-free longer. you enjoy cleaner rooms, cleaner air, and a healthier environment.
