installation fittings

SMART central vacuum systems carry dirt and debris away from living areas...and can be installed in your new or existing home — with no mess, no disturbance to your walls — usually in less than a day.

how a SMART system carries dirt and debris out of living areas...

- PVC piping installed through interior walls, attic, basement and crawlspaces connects vacuum inlets to the power unit/dirt collection receptacle (usually located in a basement and garage).
- each strategically located inlet lets you vacuum approximately 20-40 square meters.
- a SMART system can be installed in virtually any home, new or old, usually in just hours.

installation products

pvc pipe

lightweight piping is durable, rust-resistant. specially interior coating resists clogging. (#00000)

vacuum inlet valve

SMART flexible hose plugs into the inlet valve. one inlet valve lets you clean an area of approximately 20-40 square meters. (#00000)

elbow fitting

specially coated interior of fittings resists clogging at corners and joints. available in white and clear.

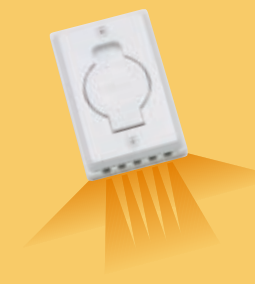

VacPan®I automatic dustpan

forget stooping or bending to use a dustpan in kitchen or bath. just sweep debris to the VacPan and turn on the toe switch... the power of your SMART system quickly removes it!

VacPan®II valve and dustpan

dual purpose VacPanII works as an inlet valve, or lift the cover and sweep debris into the VacPan.

PermaGlo™ inlet valve

pre-wired for optional PermaGlo nightlight; PermaGlo nightlight available in choice of illumination colors. (#00000)
